

How Shinso Glow Works

Shinso Glow focuses on the effects of its ingredients (mainly revitalized hydrogen water) that bind with unwanted protein (rough and dead skin) on the skin's surface to obtain a clearer, brighter skin, restoring skin back to its health. The gel will immediately react to the dead skin cells on the skin's surface once applied. This lifting off of dirt and unwanted protein/keratin keeps our face smooth and prevents skin problems.

1. Accumulated dead skin cells and dirt make the skin rough. These will cause skin problems.

2. Glow reacts to the dead skin cells and removes them from the skin surface.

3. By gently massaging, unwanted dead skin cells are being lifted off the skin's surface in the form of white particles.

4. After rinsing, skin is smoother and clearer and absorbs active ingredients in lotions and serums more effectively.

How to apply

With just 4 simple steps, you can achieve the effects of a facial in less than 3 minutes.

Step 1: Wash your face with cleanser and dry well

Step 2: Pump a small amount of Glow to be applied on the desired area. Leave it on the skin for a few seconds for Glow to react with the dead skin cells.

Step 3: Gently massage in a circular motion for 30 sections. The gel will turn in to milky liquid and white particles of dead skin cells can be seen as they are lifted off the skin.

Step 4: Rinse well with water. Your skin feels smoother and is ready for moisturizing.
